### Fidelity Conservative Income Private Pool

- Designed for investors seeking a steady flow of income with the potential for moderate growth over the long term.
- Invests in a broad range of income-oriented asset classes and provides global exposure through investments in fixed-income and equity securities from around the world.
- While the neutral mix is 20% equities and 80% fixed-income, the portfolio managers may overweight or underweight these asset classes to manage risk and capitalize on changing market conditions.

### Pool management

- Portfolio managers are Geoff Stein, David Wolf and David Tulk.
- The Pool employs an active management approach to asset allocation and security selection with an aim to mitigate risk and take advantage of market opportunities.

- 1 Management fees do not include administration and other operating expenses and applicable sales tax. Fees are shown in basis points. Note that fee reductions are applicable only on that portion of assets that fall within the specified tier.
- 2 The blended benchmark is 12% S&P/TSX Capped Composite Index, 8% MSCI All Country World ex Canada Index, 36% FTSE Canada Universe Bond Index, 24% Bloomberg Global Aggregate Bond Index and 20% FTSE Canada Short Term Bond Index.
- 3 A fund's volatility is determined using a statistical measure called "standard deviation. Standard deviation is a statistical measure of how much a return varies over an extended period of time. The more variable the returns, the larger the standard deviation. Investors may examine historical standard deviation in conjunction with historical returns to decide whether an investment's volatility would have been acceptable given the returns it would have produced. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation does not indicate how an investment actually performed, but it does indicate the volatility of its returns over time. Standard deviation is annualized. The returns used for this calculation are not load-adjusted. Standard deviation does not predict the future volatility of a fund. The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus, which contains detailed investment information, before investing. The indicated rates of return are historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of distributions. The indicated rates of return do not take into account sales, redemption, distribution or option charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed. Their values change frequently. Past performance may not be repeated. © 2022 Fidelity Investments Canada ULC. All rights reserved.
