### Calendar year performance

### Risk classification

•				
LOW	LOW TO MEDIUM	MEDIUM	MEDIUM TO HIGH	HIGH

MEDIUM IO HIGH

A fund's volatility is determined using a statistical measure called 
"standard deviation. Standard deviation is a statistical measure of how 
much a return varies over an extended period of time. The more variable 
the returns, the larger the standard deviation. Investors may examine 
historical standard deviation in conjunction with historical returns to 
decide whether an investment's volatility would have been acceptable 
given the returns it would have produced. A higher standard deviation 
indicates a wider dispersion of past returns and thus greater historical 
volatility. Standard deviation does not indicate how an investment 
actually performed, but it does indicate the volatility of its returns over 
time. Standard deviation is annualized. The returns used for this 
calculation are not load-adjusted. Standard deviation does not predict 
the future volatility of a fund.

The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

# **Fund strategy**

# Sustaining value through an active investment approach

Fidelity Canadian Bond Fund delivers enhanced return potential through a disciplined investment approach, which seeks to add value primarily through security selection and yield-curve strategies, rather than interest-rate anticipation.

\$13.39 (as at March 31, 2025)

### Aggregate assets (all series)

\$741.5 million

(as at February 28, 2025)

Management expense ratio –

0.68%, as at December 31, 2024

1 Source: Fidelity Investments Canada ULC. Performance shows annual compounded returns as at March 31, 2025 (Series F) net-offees, in Canadian dollars. ■ 2 The compound growth calculations shown is used to illustrate the effects of the compound growth rate and is not intended to reflect future values of the fund or returns on investment in any fund. ■ 3 Month-end asset mixes may total greater than/less than 100% due to differences in the timing of cashflows and investments, and/or to reflect cash held for the purposes of collateral allocations associated with certain types of derivatives. Country and sector allocations show specific exposures to countries/sectors representing at least 1% of total fund asset. As such, the values displayed may not total 100%.

Read a fund's prospectus before investing. Mutual funds are not guaranteed; their values change frequently and past performance may not be repeated. Investors will pay management fees and expenses, may pay commissions or trailing commissions and may experience a gain or loss. The indicated rates of return are the historical annual compounded total returns including changes in unit value and the reinvestment of all distributions and do not take into account sales, redemption, distribution, optional charges or income taxes payable by any security holder that would have reduced returns. If you buy other series of Fidelity funds, the performance will vary largely due to different fees and expenses. Investors who buy Series F pay investment management fees and expenses to Fidelity. Investors will also pay their dealer a fee for financial advice services in addition to the Series F fees charged by Fidelity.
