|-----------------|-------|
| 1 month | -3.74 |
| 3 month | -1.39 |
| 6 month | 4.75 |
| 1 year | 10.86 |
| 2 year | 14.01 |
| 3 year | 9.69 |
| 5 year | 10.30 |
| Since inception | 7.68 |

Growth of \$10,000 since inception¹

Calendar year performance

Risk classification

A fund's volatility is determined using a statistical measure called "standard deviation. Standard deviation is a statistical measure of how much a return varies over an extended period of time. The more variable the returns, the larger the standard deviation. Investors may examine historical standard deviation in conjunction with historical returns to decide whether an investment's volatility would have been acceptable given the returns it would have produced. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation does not indicate how an investment actually performed, but it does indicate the volatility of its returns over time. Standard deviation is annualized. The returns used for this calculation are not load-adjusted. Standard deviation does not predict the future volatility of a fund.

The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

QUARTERLY TOP TEN HOLDINGS

AS AT DECEMBER 31, 2024
