Fidelity Canadian Equity Private Pool

- Uses the same proven investment approach offered to institutional investors such as pension funds, foundations and endowments.
- Focuses on Canadian equities for long-term growth, typically holding 80–100 stocks.
- Sector neutral, and diversified across all sectors of the Canadian economy, in roughly the same proportion ($\pm 2\%$) as the S&P/TSX Capped Composite Index.
- Has sector investment monitored by a specialist in that sector.
- Monitors more than 400 Canadian stocks, always looking for the best opportunities.

Pool management

- Portfolio manager is Andrew Marchese.
- The Pool employs a fundamental bottom-up security selection investment approach.

- 1 Management fees do not include administration and other operating expenses and applicable sales tax. Fees are shown in basis points. Note that fee reductions are applicable only on that portion of assets that fall within the specified tier.
- 2 The Pool invests its assets in units of Fidelity Canadian Equity Investment Trust. Holdings information shown on this page represents the Pool's exposure to the holdings of Fidelity Canadian Equity Investment Trust.
- 3 The underlying Pool aims to invest in sectors in approximately the same proportions as those sectors are represented in the S&P/TSX Capped Composite Index, with the exception of the real estate sector which the portfolio manager will consider as an industry group within the financials sector.
- 4 A fund's volatility is determined using a statistical measure called "standard deviation. Standard deviation is a statistical measure of how much a return varies over an extended period of time. The more variable the returns, the larger the standard deviation. Investors may examine historical standard deviation in conjunction with historical returns to decide whether an investment's volatility would have been acceptable given the returns it would have produced. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation does not indicate how an investment actually performed, but it does indicate the volatility of its returns over time. Standard deviation is annualized. The returns used for this calculation are not load-adjusted. Standard deviation does not predict the future volatility of a fund. The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

Source: Fidelity Investments Canada ULC. Performance shows annual compounded returns as at March 31, 2025 (Series F) net-of-fees, in Canadian dollars.

Read a fund's prospectus before investing. Mutual funds are not guaranteed; their values change frequently and past performance may not be repeated. Investors will pay management fees and expenses, may pay commissions or trailing commissions and may experience a gain or loss. The indicated rates of return are the historical annual compounded total returns including changes in unit value and the reinvestment of all distributions and do not take into account sales, redemption, distribution, optional charges or income taxes payable by any security holder that would have reduced returns. If you buy other series of Fidelity funds, the performance will vary largely due to different fees and expenses. Investors who buy Series F pay investment management fees and expenses to Fidelity. Investors will also pay their dealer a fee for financial advice services in addition to the Series F fees charged by Fidelity. © 2025 Fidelity Investments Canada ULC. All rights reserved.
