Fidelity Balanced Private Pool

- Balanced asset class diversification with exposure to several different pools.
- While the neutral mix is 60% equities and 40% fixed-income and short-term investments, the portfolio managers may overweight or underweight these asset classes to manage risk and capitalize on changing market conditions.

Pool management

- Portfolio managers are David Wolf and David Tulk.
- The Pool employs an active management approach to asset allocation and security selection with an aim to mitigate risk and take advantage of market opportunities.
- Together, both managers implement a disciplined investing style to ensure the Pool's strategy adheres to its investment objectives.

- 1 Management fees do not include administration and other operating expenses and applicable sales tax. Fees are shown in basis points. Note that fee reductions are applicable only on that portion of assets that fall within the specified tier.
- 2 The Pool is closed to new purchases and switches for registered plans, except for existing systematic transactions. You may not purchase securities of this Pool within a registered plan. You may purchase securities of Fidelity Balanced Private Pool Trust instead.
- 3 On January 15, 2016, the Pool's objectives changed to permit the Pool to invest primarily in underlying funds, including Fidelity Funds and ETFs, that generally invest in equity and fixed income securities.
- 4 The blended benchmark is 33.5–36.0% S&P/TSX Capped Composite Index, 14.0% Bloomberg Global Aggregate Bond Index, 24.0% MSCI ACWI (All Country World Index) ex Canada Index, 18.5–21.0% FTSE Canada Universe Bond Index, 5.0% FTSE Canada 91 Day T-Bill Index and 0–5.0% MSCI/REALPAC Canada Quarterly Property Index. Prior to July 1, 2024, the blended benchmark was 36.0% S&P/TSX Capped Composite Index, 14.0% Bloomberg Global Aggregate Bond Index, 24.0% MSCI ACWI (All Country World Index) ex Canada Index, 21.0% FTSE Canada Universe Bond Index, and 5.0% FTSE Canada 91 Day T-Bill Index.
- 5 A fund's volatility is determined using a statistical measure called "standard deviation. Standard deviation is a statistical measure of how much a return varies over an extended period of time. The more variable the returns, the larger the standard deviation. Investors may examine historical standard deviation in conjunction with historical returns to decide whether an investment's volatility would have been acceptable given the returns it would have produced. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. Standard deviation does not indicate how an investment actually performed, but it does indicate the volatility of its returns over time. Standard deviation is annualized. The returns used for this calculation are not load-adjusted. Standard deviation does not predict the future volatility of a fund. The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of the fund. Standard deviation is used to quantify the historical dispersion of returns around the average returns over a recent ten-year period.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus, which contains detailed investment information, before investing. The indicated rates of return are historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of distributions. The indicated rates of return do not take into account sales, redemption, distribution or option charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed. Their values change frequently. Past performance may not be repeated. © 2025 Fidelity Investments Canada ULC. All rights reserved.
