

Gain exposure to emerging markets and their potential growth opportunities.

Go beyond developed markets

More ways to access global stocks from countries beyond developed markets.

Navigate a more complex market

Emerging markets can be harder to assess and can change quickly. Fidelity's active approach aims to find strong companies and help manage risk through research, diversification and ongoing monitoring across companies, countries and currencies.

Specialized and experienced portfolio manager

Over 20 years of investment experience focused on looking for high quality companies with long-term growth potential across emerging markets.

Investment approach

JOHN DANCE

Portfolio Manager

With over 20 years of investment experience, John Dance applies a research-driven approach to emerging markets, backed by Fidelity's global research team. He focuses on identifying companies he views as strong and well-run with the potential to grow over time, while considering opportunities and risks across countries and regions.

Why Fidelity for emerging markets

Research

Deep experience in debt and equity markets and high-quality proprietary research offer more coverage and opportunities (small caps, IPOs, debt issuance).

Investment context

Fidelity's resources provide a rich context for analysis, spanning supply chains, competitors, company history, M&A insights and debt investor perspectives.

Sector focus

Sector-focused research experts provide global and regional perspectives.

Disciplined process

The disciplined investment process selects stocks and issues based on fundamentals and uses risk assessment to construct the portfolio.

Sovereign insights

Comprehensive top-down analysis assesses macroeconomic factors.

Commissions, trailing commissions, management fees, brokerage fees and expenses may be associated with investments in mutual funds and ETFs. Please read the mutual fund's or ETF's prospectus, which contains detailed investment information, before investing. The indicated rates of return are historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of distributions. The indicated rates of return do not take into account sales, redemption, distribution or option charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds and ETFs are not guaranteed. Their values change frequently, and investors may experience a gain or a loss. Past performance may not be repeated.

Unlike traditional mutual fund series, exchange-traded series (ETF series) are traded on stock exchanges. In the event of a disruption or a halt in trading of the ETF series on a stock exchange or marketplace on which the ETF series of a fund are traded, the trading price of the ETF series may be affected. As a result, the disruption or halting of such trading may cause a performance variance between the ETF series and the traditional mutual fund series because the ETF series may trade in the market at a premium or discount to the net asset value (NAV) per unit. There can be no assurance that the ETF series trading price will behave similar to the NAV per unit. The trading price of the ETF series will fluctuate in accordance with changes in a fund's NAV, as well as market supply and demand on the exchange or marketplace on which the ETF series are traded. As such, the performance between the ETF series and the traditional mutual fund series of a fund may vary. In addition, there are other factors that could lead to performance variances between the ETF series and the traditional mutual fund series, such as, for example, brokerage commissions and HST.

Investments in emerging markets may involve higher risks than developed markets, including political and economic instability, underdeveloped regulatory and legal frameworks, and greater exposure to currency fluctuations, which can result in increased volatility and potential losses.

The investment risk level indicated is required to be determined in accordance with the Canadian Securities Administrators standardized risk classification methodology, which is based on the historical volatility of a fund, as measured by the ten-year annualized standard deviation of the returns of a fund or those of a reference index, in the case of a new fund.
