

# The Fidelity Factor®

# The power of factor investing in your portfolio

## Factor ETF fundamentals

#### WHAT IS A FACTOR?

A factor is a measurable **characteristic** that can be used to select which securities to invest in.

Targets securities with lower risk than the broader market, as well as stable earnings.

Seeks excess returns from stocks that have higher-than-average dividend yields.

Targets companies with stable profitability and cash flows, a lack of excessive leverage or better credit quality.

Seeks lower-cost securities that are undervalued relative to their intrinsic value.

Seeks the excess returns of smaller firms (by market capitalization) relative to their larger counterparts.

Finds securities with improving fundamentals that have recently outperformed, and may continue to do so over the medium term.

Factors can be compared to portfolio manager investment styles. For example:

- A value portfolio manager seeks undervalued securities.
- A high-quality ETF tracks an index composed of securities that generate solid profits, possess strong balance sheets and demonstrate stable cash flows.

### WHAT IS A FIDELITY FACTOR® ETF?

A Fidelity Factor® ETF is actively designed because an index is **custom built around** a **chosen factor**.

It is passive in execution because it tracks its custom-built index using **a rules-based methodology**.

#### **Example:**

- Fidelity Canadian Low Volatility ETF could meet your investment goals.
- This factor ETF tracks a custom-built index that looks for securities that are less volatile.

Your goals will help indicate which Fidelity Factor ETF is the right choice.

momentum, size and value.

#### WHY SHOULD I CONSIDER A FIDELITY FACTOR ETF IN MY PORTFOLIO?

Fidelity Factor ETFs are **outcome-oriented investments** that help you achieve your financial goals by capturing factor-based opportunities the market may miss.

Source: Bloomberg, as of October 31, 2024.

The gross dividend yield is calculated by taking the compounded annualized difference between the total return index value and price return index value for the 12-month period ended 31 October 2024. The hypothetical returns shown above are for illustrative purposes only and are only intended to show the back-tested historical annualized total returns of the Fidelity Canada U.S. High Dividend Index (the "Index") if the Index had existed during the time period indicated above. The hypothetical performance shown is not the actual performance of the Index, a fund or a client portfolio. The S&P 500 Index is a widely recognized index of 500 U.S. common stocks of large- and mid-capitalization companies. Investing directly in an index is not possible.
