Lesson 6

Stock market tracker

1. Write the stock price for the round (the teacher will announce it).
2. Write your action, e.g. "Market Buy 5 shares," "Limit Buy 5 @ $48," "Stop-Loss Sell @ $45."
3. After the die roll and price update, mark shares bought/sold, update cash remaining and shares owned, and calculate portfolio value at the new price.

Round	Stock price	Action (order type and details)	Shares bought/sold	Cash remaining	Shares owned	Portfolio value (cash + shares × price)
0	$50		0	$500	0	$500

Lesson 6

Consolidation: Discuss one question from each category with your team.

DECISION-MAKING

1. What type of order did your team use most, and why?
2. Was there a time you wished you used a different order? What happened?
3. How did emotions (like fear of losing or excitement) affect your team's decisions?

MARKET BEHAVIOUR

1. How did the rumour alerts influence your perception of the stock's value?
2. Even though the dice rolls were random, did it feel like there were trends? Why do you think that is?
3. If this were real money, would you have made the same decisions?

ORDER TYPES REFLECTION

1. In what situations might a limit order be safer than a market order?
2. How can stop orders help manage risk in real life?
3. What was the hardest order type to understand, and what helped it click?

REAL-WORLD CONNECTIONS

1. How does this simulation compare to what you imagine real investing is like?
2. If you were investing in a real company, what other information would you want to know before placing an order?
3. Do you think young people should invest in stocks? Why or why not?
