Lesson 6

Stock order tracker

You've been tracking a sneaker company called **Kicks Unlimited**, and you've saved enough to invest. You'll simulate how different types of stock orders behave over time based on the stock's price movement.

1. **Before:** Write down your **assigned order type** and **target/trigger price** in the Order Tracker chart before the stock market simulation begins.
2. **During:** Your teacher will pull up market changes that happen on a daily basis (from Day 1 to 10). When/if you see your price get triggered, note when the order was **executed**, and **at what price**.
3. **After:** When all 10 days have been executed, note down the advantages and disadvantages of your decision (order type and trigger price).

Your order tracker

Question	Your response
Before: assigned order type	
Before: What is your target or trigger price?	
During: Does the order get triggered during the 10 intervals? If yes, at what price and at which time interval?	
After: What were the advantages of this decision?	
After: What were the disadvantages of this decision?
