

# A Candid Conversation on Canadian Concerns

**David Wolf** | Portfolio Manager

**David Tulk, CFA** | Portfolio Manager

**Ilan Kolet** | Institutional Portfolio Manager

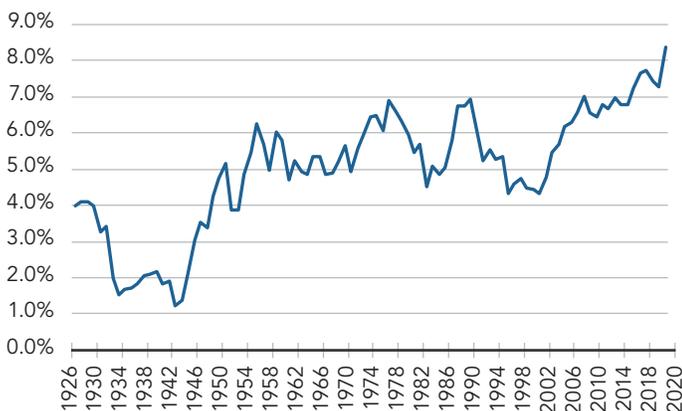

## Key Takeaways

- The global recovery helps the Canadian economy but domestic challenges like housing-related imbalances have intensified
- We retain an underweight to Canadian assets

An overweight to unhedged foreign assets is one of the high conviction positions we hold in the multi-asset class funds we manage for Canadian investors. We

have maintained this underweight to Canadian assets throughout the market and economic tumult of recent years, including a trade war between the United States and China and a global pandemic. To help understand both the conviction and durability of our investment stance, we answer some of the most frequently asked questions related to our views on the Canadian economy and asset markets.

## Even before the global pandemic you had concerns about Canada. Why?

Our concern around the vulnerabilities in the Canadian economy is rooted in imbalances that have built up over time. Too much of the growth of the economy over the past decade has been debt-fueled housing

and consumer spending activity at the expense of exports and productive business investment. Residential investment now accounts for nearly nine percent of Canadian economic output, the highest share in records dating back nearly one hundred years.

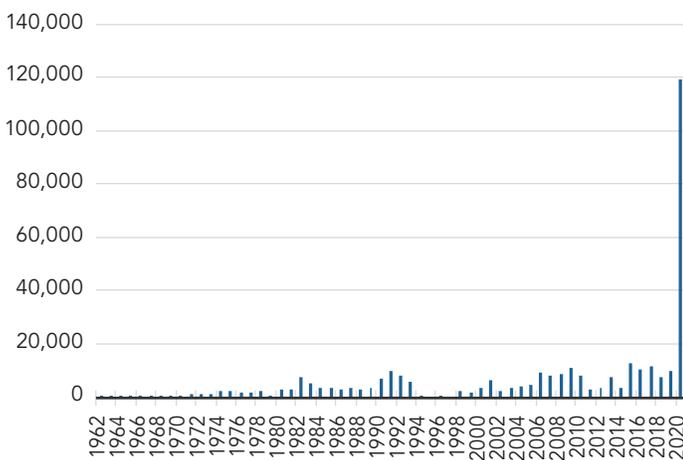

Another concern is the vulnerability a small open market economy like Canada faces to the observed retreat in globalization (see Figure 2). Exports have historically made up a significant share of economic output, and any increase in trade friction would disproportionately affect a country like Canada.

### How is Canada’s recovery proceeding?

Canada’s economy is recovering. The unemployment rate has fallen to 7.5% from a pandemic peak of 13.7%, though this remains well above the 5.7% pre-covid rate. Further progress from here is likely to be slow in the near-term, with public health measures intended to address the pandemic serving to delay the recovery. But the medium-term outlook is brighter. The increase in government transfers to individuals (see Figure 3)

has been an order of magnitude above anything seen in Canada in the last half-century, leaving domestic consumers awash in cash and presumably eager to spend upon a fuller reopening of the economy.

However, those massive fiscal transfers have been funded by an even more massive rise in government borrowing, which has exacerbated a critical vulnerability in Canada. Household and corporate debt levels were badly extended in Canada prior to the pandemic, with public debt joining early last year. The pandemic-related increase in public debt in Canada exceeded all other G-7 countries, with private sector debt pushing higher as well. Our ongoing concern surrounds the sustainability of these debt levels and how they will be ultimately resolved. As we’ve noted in the past, Canadian debt excesses relative to the US have been a reliable leading indicator of the bilateral Canada-US exchange rate. The deterioration of fiscal balance sheets through the early 1990s severely undercut the value of the Canadian dollar in the years following, a risk we see poised to recur in the not-so-distant future.

### How have Canada’s imbalances evolved and how will they be addressed?

Canada’s imbalances have gotten worse through the pandemic. Housing has further taken over the economy, now accounting for more than 40% of all capital spending in Canada. That’s only happened in three other developed countries in the past 20 years – Greece, Spain and Ireland, in what turned out to be epic housing bubbles in the mid-2000s. All three countries subsequently suffered deep recessions. All three saw peak-to-trough declines in house prices of more than 35%. In all three, prices today remain well below their peaks, more than a decade after the bubbles burst.

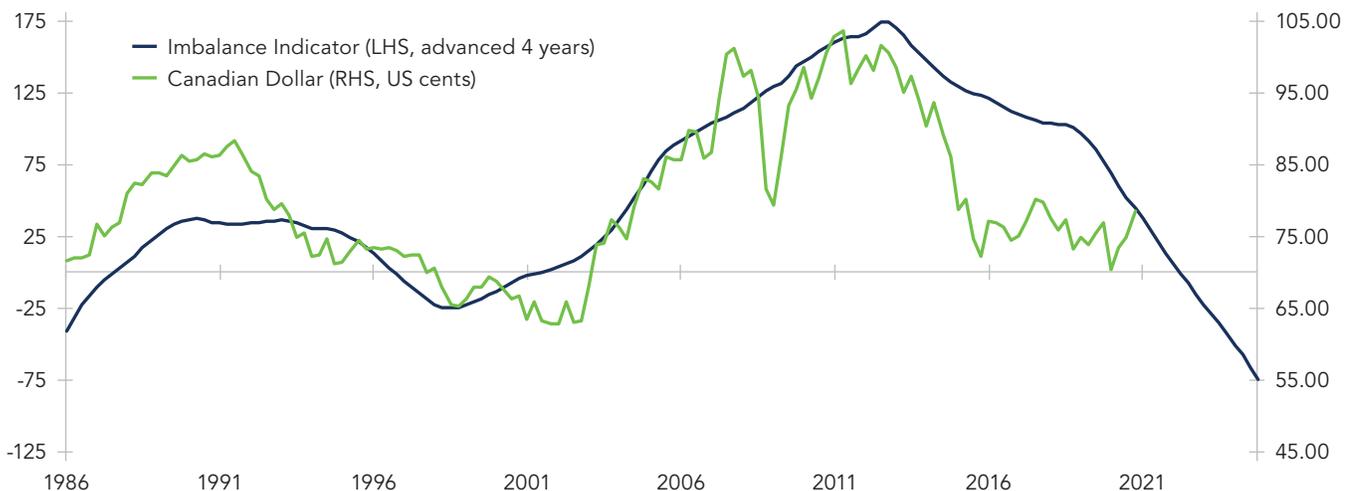

We can’t know precisely how the housing-related imbalances in Canada will play out. But here is one possibility. The current froth in the housing market will be compounded later this year by a surge in Canadian consumer spending, as the aforementioned combination of record government transfers and post-pandemic re-opening results in the sort of ‘light-switch economy’ that is emerging in the US. The resulting rise in inflation

will tend to push interest rates higher, with even a small increase in rates putting enormous pressure on an already highly indebted economy. While the Canadian dollar might temporarily benefit from higher rates, as in the early 1990s, ultimately a large depreciation will be needed to improve competitiveness and support exports as domestic demand buckles. Exchange rate adjustment, which was not available to the euro-bound economies mentioned above, is likely to be a critical component in the rebalancing that will eventually be required in Canada.

### How does this outlook influence your positioning?

The central theme that underpins our overall positioning, including our overweight to risk assets generally, is the global robust reopening that is underway. As more of the population becomes vaccinated and restrictions lift, we expect record savings and pent-up demand to fuel a sharp increase in consumer spending globally. The expectation of a cyclical bump higher in growth should help economies that are levered to global growth, notably including Canada and emerging markets (EM).

**EXHIBIT 5: Canadian economic imbalance indicator**

As we have mentioned, however, we have structural concerns with respect to the Canadian outlook; while a number of emerging economies have their own idiosyncratic issues, owning them as a group provides diversification against the realization of Canada-specific risks. As a result, we are funding an overweight to EM equities with an underweight to Canadian equities.

We have outlined our concerns around the unsustainable trajectory of government and total economy debt in Canada and the risk they are resolved with higher inflation rates. This is one reason we are underweight Canadian bonds and overweight inflation protection within the fixed income components of our portfolios.

Another point worth highlighting is our underweight to the Canadian dollar. We've mentioned that we believe a depreciation is required to rebalance the Canadian economy, but the nuance here is that we also expect a US dollar depreciation. For this reason, we've taken positions that we believe will do well in the event

of a Canadian and US dollar depreciation, such as our overweight positions to EM and the overseas developed regions, coupled with underweight positions in Canada and the US.

The final point worth mentioning related to our Canadian dollar underweight relates to risk management. The Canadian dollar is a cyclical currency, correlated with movements in equity markets in particular (see Figure 6). So when markets go down, the CAD also tends to go down, as investors shift their holdings in favour of safe-haven currencies. The market upset early last year was a prime example. As global markets fell, the Canadian dollar depreciated sharply. Our underweight to the Canadian dollar cushioned the impact of this decline in the multi-asset class portfolios we manage for Canadian investors.

Certain Statements in this commentary may contain forward-looking statements ("FLS") that are predictive in nature and may include words such as "expects", "anticipates", "intends", "plans", "believes", "estimates" and similar forward-looking expressions or negative versions thereof. FLS are based on current expectations and projections about future general economic, political and relevant market factors, such as interest and assuming no changes to applicable tax or other laws or government regulation. Expectations and projections about future events are inherently subject to, among other things, risks and uncertainties, some of which may be unforeseeable and, accordingly, may prove to be incorrect at a future date. FLS are not guarantees of future performance, and actual events could differ materially from those expressed or implied in any FLS. A number of important factors can contribute to these digressions, including, but not limited to, general economic, political and market factors in North America and internationally, interest and foreign exchange rates, global equity and capital markets, business competition and catastrophic events. You should avoid placing any undue reliance on FLS. Further, there is no specific intentional of updating any FLS whether as a result of new information, future events or otherwise.

Currency neutrals funds use derivatives to mitigate the fund's exposure to changes in exchange rates between developed market currencies and the Canadian dollar. The investment approach used by the funds, while effective in reducing exchange rate risk, will not completely eliminate the impact of currency fluctuations. The funds' returns will differ from the local currency returns of its underlying funds.

"Fidelity Investments" and/or "Fidelity" refers collectively to: i) FMR LLC, a US company, and certain subsidiaries, including Fidelity Management & Research Company (FMR Co.) and Fidelity Management & Research (Canada) ULC ("FMR-Canada") - which carries on business in British Columbia as FMR Investments Canada ULC; and ii) Fidelity Investments Canada ULC ("FIC") and its affiliates. Fidelity Management & Research (Canada) ULC ("FMR-Canada") commenced business in Ontario on February 1, 2018. FMR-Canada is registered as a portfolio manager with the Ontario Securities Commission ("OSC") and as a portfolio manager with the other Canadian securities commissions. The scope of FMR-Canada's business is currently limited to offering the Global Asset Allocation ("GAA") strategies through a discrete portfolio management team at FMR-Canada. The GAA strategies are offered by FMR-Canada on a sub-advised basis to accounts advised by Fidelity Investments Canada ULC ("FIC"), with FMR-Canada acting as either direct sub-adviser to FIC or as sub-sub-adviser through non-Canadian Fidelity advisers, including (and principally) US SEC-registered investment advisers, such as FMR Co., Inc. ("FMRCo"). FMR-Canada does not offer these strategies directly to investors in Canada. FMR-Canada has also registered "Fidelity Investments" as a trade name in Canada.
